

FlatBox Small Package - Big Performance!

The innovative concept behind the FlatBox unites optimized storage and shipping costs with cleverly designed, toolless, fast one-person assembly. Compatible with the extensive range of existing system accessories it can be used as a wall-mounted or floor-standing enclosure.

The FlatBox can be supplied in heights between 6 and 21 U, depths of 400 and 700 mm and widths of 600 to 700 mm. For 12 U and higher FlatBoxes, levelling feet are supplied to use when mounting on the ground. Each FlatBox has passive ventilation which can have active fans mounted to ensure that active equipment is ventilated with ambient air.

Assembling the wall-mounted enclosure is a simple task. The rear section is used to mark the four fixing points on the wall. The basic supports on the right and left are secured to the rear panel using snap-in connectors. These maximize working space and optimize accessibility as they do not obscure any of the system components. Additional cut-outs offer more space for managing cables and connections.
