VARIOFACE Professional Field Termination Assemblies (FTA) and over-moulded cables feature a contemporary, industrial design and a next-generation approach to passive, discrete wiring. Modules are ideal for applications requiring fast, fault-free field device connection to process or motion controllers. They are available in FLK (ribbon), DSUB, OEM controller-specific, and power distribution versions.

VARIOFACE Professional uses DIN rail space efficiently in the control cabinet to complement the latest in controller architecture.

Modules

- Patented slice design reduces space requirements in the control cabinet
- Clearly marked I/O terminals for easy identification when devices mounted
- Integrated standard ZB markers provide flexible device marking
- A single rail-mounting foot allows easy installation and removal of modules
- Custom marking meets specific customer needs

Over-moulded Cables

- Each cable has a 90 degree over-mould to connect to a field termination assembly, while a 180 degree connector on the other end attaches to the control device
- Optimal strain relief
- Safeguard against puncturing exposed conductors
